

Are you a veterinarian? Allow me to ask you a few questions.....

- What do you do when traditional medications don't work or are not tolerated?
- What if the root cause of an illness can't be identified?
- What do you do when mainstream treatments aren't effective or are undesirable to the patient?

Hello I'm Dr. Jill Briska – chiropractor and animal lover! I am looking to work with veterinarians so they can offer a cutting-edge technology to their pet patients without any investment by the provider!

CyberScan is perfect for veterinarians seeking an objective assessment and non-invasive way to assess and treat genetic, biological, environmental, emotional and lifestyle imbalances. It is cost effective, gentle, easy to implement in your office, and highly effective. The scan is targeted and the treatment is individualized. With very few contraindications it can be safely integrated to support your current treatment protocols. No products to stock and no minimum purchase required.

Here are just some of CyberScan's benefits for the pet:

Strengthens and balances the immune system • Identifies parasites, roundworms, tapeworms, bacteria, viruses, and more • Alleviates or reduces pain • Helps to balance and decrease allergies • Comforts the psyche and reduces stress so it's a powerful tool for behavioral issues.

Pet owner's benefit with continuity in care by their same provider that they trust. Going from doctor to doctor is difficult and stressful to the pet and pet owner. The process could not be easier and the treatment protocol is easy for owner and pet alike. No additional supplements to buy or special diet necessary.

By working with me you can benefit from CyberScan's technology without needing to purchase your own CyberScan and be trained to use it. You do not have to risk sending patients for an outside visit to another practitioner. You remain in control of the direction of care of your patient.

The best part – I come to you! I remain completely behind the scenes, helping you to offer another way to assess and improve your established patient's health and wellness.

CyberScan helps connect the healthcare dots in both simple and complex cases. It can supplement what treatments you already provide and offer added value to your patients.
